NJDOH Healthcare Personnel (HCP)\^ EXPOSURE to Confirmed COVID-19 Case Risk Algorithm

**HCP who have PROLONGED CLOSE CONTACT with patient (e.g. within 6 feet for over 1-2 minutes) OR having UNPROTECTED DIRECT CONTACT WITH INFECTIOUS SECRETIONS OR EXCRETIONS of the patient**

- Was HCP using respirator or face mask? 
  - Yes
  - No
  - Was patient wearing a facemask? 
    - Yes
    - No
    - HIGH RISK

- Was HCP wearing a RESPIRATOR? 
  - Yes
  - No
  - Was patient wearing a facemask? 
    - Yes
    - No
    - WAS HCP wearing eye protection? 
      - Yes
      - No
      - Did HCP have extensive body contact with patient? (e.g. rolling patient) 
        - Yes
        - No
        - MEDIUM RISK

- Was HCP wearing eye protection? 
  - Yes
  - No
  - Did HCP have extensive body contact with patient? (e.g. rolling patient) 
    - Yes
    - No
    - MEDIUM RISK

- Was HCP using respirator or face mask? 
  - Yes
  - No
  - Was patient wearing a facemask? 
    - Yes
    - No
    - LOW RISK

- Was HCP wearing a RESPIRATOR? 
  - Yes
  - No
  - Did HCP have extensive body contact with patient? (e.g. rolling patient) 
    - Yes
    - No
    - LOW RISK

- Was HCP eyes, nose AND mouth protected? 
  - No
  - YES
  - NO IDENTIFIABLE RISK

- LOW RISK

**HCP who had brief interactions with a patient such as conversations at triage, briefly entering patient room but not having direct contact with the patient or patient’s secretions/excretions, or entering patient room immediately after discharge**

- Was patient wearing a facemask? 
  - Yes
  - NO IDENTIFIABLE RISK

- Was HCP wearing a RESPIRATOR? 
  - Yes
  - NO IDENTIFIABLE RISK

- LOW RISK

**HCP who walk by a patient or who have no direct contact with the patient or their secretions/excretions and no entry into the patient room**

- Did HCP have extensive body contact with patient? (e.g. rolling patient) 
  - Yes
  - No
  - LOW RISK

See back for monitoring and work restriction recommendations
For this guidance, CDC defines HCP as all paid and unpaid persons serving in healthcare settings who have the potential for direct or indirect exposure to patients or infectious materials, including body substances; contaminated medical supplies, devices, and equipment; contaminated environmental surfaces; or contaminated air. For this document, HCP does not include clinical laboratory personnel.

Procedures likely to generate higher concentrations of respiratory secretions or aerosols include, but are not limited to, cardiopulmonary resuscitation, intubation, extubation, bronchoscopy, nebulizer therapy, or sputum induction.

If during monitoring the person develops any fever (measured temperature $\geq 100.0^\circ\mathrm{F}$ or subjective fever) OR respiratory symptoms consistent with the 2019 Novel Coronavirus infection (e.g. cough, shortness of break, sore throat) they should immediately self-isolate (separate themselves from others) and promptly notify their local or state public health authority and healthcare facility for further evaluation.

In situations of suspected community transmission facilities could consider allowing asymptomatic HCP who have had an exposure to a COVID-19 patient to continue to work after options to improve staffing have been exhausted and in consultation with their occupational health program. These HCP should still report temperature and absence of symptoms each day prior to starting work. Facilities could have exposed HCP wear a facemask while at work for the 14 days after the exposure event if there is a sufficient supply of facemasks. If HCP develop even mild symptoms consistent with COVID-19, they must cease patient care activities immediately and don a facemask.
